		Water Quality for Irrigation (annex XVI, DL n.º 236/98)	
Parameters	Units	Results	Conformity
Alkalinity	mg/L CaCO3	118	
Ammonium	mg/L NH4	0,052	
Nitrogen Kjeldahl	mg/L N	0,56	
Total Nitrogen	mg/L N	0,73	
Bicarbonates	mg/L CO3H-	144	(a)
Boron	mg/L B	0,0307	●
Calcium	mg/L Ca	38,4	
Chloride	mg/L Cl	56,2	●
Total Hardness	mg/L CaCO3	172	
Dissolved Iron	mg/L Fe	<L.Q.	0,010
Phosphates	mg/L P2O5	0,22	
Total Phosphorus	mg/L P	0,096	
Magnesium	mg/L Mg	18,5	
Manganese	mg/L Mn	0,0316	●
Nitrates	mg/L NO3	<L.Q.	2
Nitrites	mg/L NO2	0,0157	
Potassium	mg/L K	6,6	
Ratio of Sodium Absorption (SAR)		1,2	●
Ratio of Sodium Absorption adjusted (SARaj)		1,252	
Sodium	mg/L Na	36,2	
Total Dissolved Solids (TDS)	mg/L	281	●
Total Suspended Solids (TSS)	mg/L	5,1	●
Sulphates	mg/L CO4	37,2	●
Total Coliforms	UFC/100 mL	22	
Fecal Coliforms	UFC/100 mL	14	●

Note: With the exception of the SARaj parameter, test to determine the remaining parameters are included in the range of laboratory accreditation.

Field Results			Water Quality for Irrigation
(Determined with a multiparameter probe)			(annex XVI, DL n.º 236/98)
Parameters	Units	Results	Conformity
Temperature	°C	20,9	
pH	Escala Sorensen	8,30	●
Conductivity	µS/cm	493	●

- Lower than the VMR (Maximum Value Recommended).
- Higher than VMR and below the VMA (Maximum Permitted Value).
- Higher than VMR. For this parameter is not defined one VMA.
- Higher than the VMA.

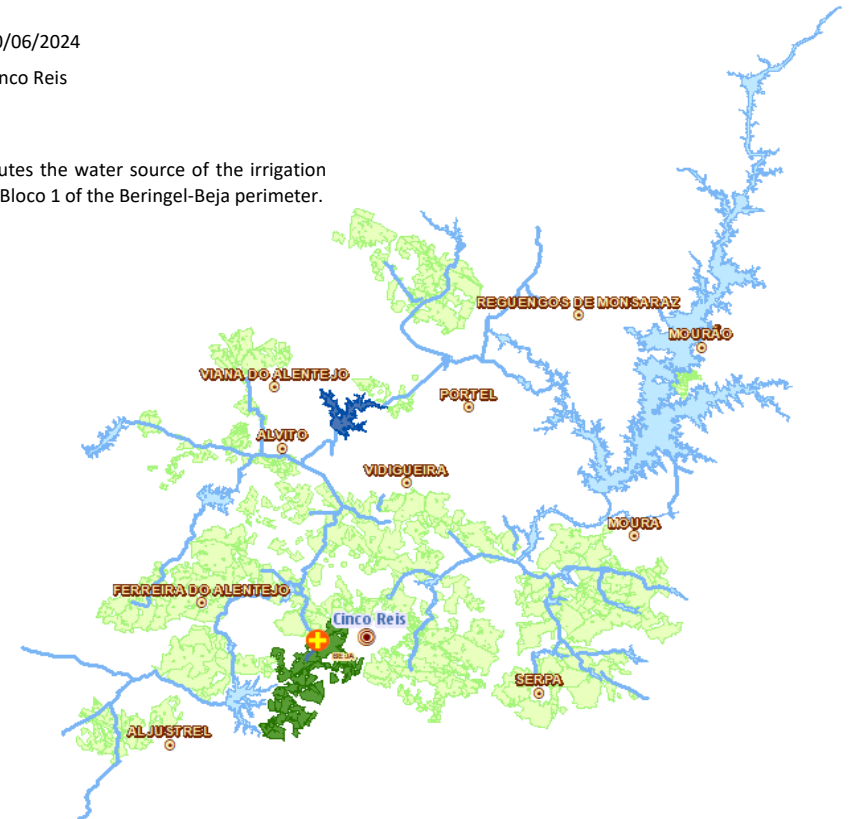

(a) The maximum value recommended in the Integrated Production Standards, for most crops, is 90 mg / L.

Sampling Data: 20/06/2024

Sampling Place: Cinco Reis

Benefited areas:

The reservoir of Cinco Reis constitutes the water source of the irrigation perimeter Cinco Reis-Trindade and Bloco 1 of the Beringel-Beja perimeter.

Comments:

The bicarbonate values exceed the maximum value recommended in the Integrated Production Standards. High concentrations of bicarbonates can affect crop yields, making it difficult to absorb some mineral nutrients.

The results of the remaining elements are within the range of expected values for this typology of water bodies.

In the document "Water Quality - Complementary Information", EDIA recommends some general measures to reduce the concentration of salts in the water bodies.
